■ 프로그램 작성

```cpp
void main()
{
        //  헝가리안 표기법 변수 선언
        bool isTest, bTest;
        char chLetter;
        int nData, nData2, nData3;
        float fData;
        double dData;

        isTest = true;
        bTest = false;

        chLetter = 'a';
        nData = 10;
        fData = 0.5f;
        dData = 0.5;

        cout << "isTest " << isTest << endl;
        cout << "chLetter " << chLetter << endl;
        cout << "nData " << nData << endl;
        cout << "fData " << fData << endl;
        cout << "dData " << dData << endl;
        cout << "=============================" << endl;

        nData = 10;
        nData2 = 3;
        nData3 = nData + nData2;

        cout << "nData + nData2 = " << nData3 << endl;
        cout << "nData * nData2 = " << nData * nData2 << endl;
        cout << "=============================" << endl;

        cout << "정수를 입력 하세요 : ";
        cin >> nData3;
        cout << nData3 << endl;

        system("pause");
}
```
